

Inconsistency	CPO = EO (+) RO
Dangling transition: Missing source or target of the transition.	<p>Create a transition (+) between existing states.</p> <p>Create a transition (+) with a new source/target state.</p> <p>Remove a state (+) and its incident transitions.</p> <p>Remove a state (+) and reconnect the transitions (outgoing/incoming) to a (previously adjacent) states.</p>
Message without signature: A message always needs a corresponding operation (with same name) in the receiver class.	<p>Create a message (+) and a new corresponding operation in the receiver class.</p> <p>Move an operation to another class (+) and set the receiver of the corresponding message to this class.</p> <p>Change the receiver of a message (+) and move the corresponding operation to the new receiving class.</p>
Unimplemented operation: A class that implements an interface needs all operations of this interface.	<p>Create an interface operation (+) and the operations of the implementing classes.</p> <p>Rename an interface operation (+) and the implementing operations.</p>
Missing property type: An attribute or association must have a type.	<p>Delete a class (+) and all attributes with this type.</p> <p>Delete a class (+) and all incident associations.</p>
Missing trigger: A transition needs a trigger.	Create a transition with name T (+) which is triggered by an operation with name T.
Untyped Lifeline: A lifeline must represent a property of a class.	Create a new lifeline with a receiving message; set the signature of the message (+) and set the type of the lifeline.
